# BatchXpert License Model

---

License model BatchXpert system is separated into two parts. One license is the BatchXpert system, and the other is the operating station license. All licenses are "one cost" **and do not require any monthly or yearly maintenance cost.**

**Each plant requires one "BatchXpert license",** throughout the factory and **one license for each operating station** being added to the system. A typical installation with two operating stations requires one license for "Batch" and two licenses of "operating station", one for each station.

Small installations for singular machines, such as CIP-Stations, Pasteurizer etc. do not require an "BatchXpert" license, and only need an "Operation Station" license.

**The Batch license is unlimited,** and there is no need to add a new license if the system size is increased, or when incorporating new PLC system or equipment. Only one license "operating station" for each station is required to add is required.

**The Operating Station Licenses are also Unlimited,** and do not have any restrictions on the Modules that can be used, the number of tags configured and/or used, or any other restriction. **Operating station licenses can be purchased at any time and added to the system,** at no additional cost, apart from the Operating station license itself.

## Touch Panels

---

For the use of touch panels, one must consider two situations depending on the Hardware that is being considered.

- 1. WinCC Comfort based Panels (Simatic Comfort), MoViCon based Panels (Vipa Eco)**

For these kinds of panels, no additional license cost is required since these Panels already include an HMI runtime license from the manufacturer. However, this requires that an HMI is being created in the Manufacturer provided Software.

*It must be noted that external HMI systems, do not operate without an accompanying Operating Station, since they lack the Recipe and Reporting functionalities required.*

- 2. Touch PC systems**

Are considered as "Operating Station" and require an "Operating Station" license. They also form part of the Redundancy. This option is recommended, as it reduces the amount of engineering required while also reducing system complexity by avoiding multiple HMI solutions.

## Client/Server Model

---

**BatchXpert usually does not differentiate between "Servers" and "Clients",** but considers all **Stations as equal "Servers",** that have connections to all PLC's and can function on their own without dependency on any other Station. "Client" Stations are possible, but usually not used in the BatchXpert System.

**The System does not require a Central database Server.**

## Virtualization

---

Virtualization is possible with BatchXpert, though not recommended, since it degrades the systems redundancy. Each Virtualization Instance is considered an "Operating Station", thus the normal Licensing Model applies.

# License Costs

---

## BatchXpert

**1250 Euro**

This license is required once per Site. This license provides access to all “Batch Processing” related functionality.

- No limitation for amount of processing “Units”, “Recipes”, “Phases” etc.
- No limitation for amount of “Control Modules”
- No Limitation for amount of connected “Controllers” (Plc’s)

*Note: Limitations due to PLC Hardware may still apply and may limit the amount of automation objects use. Please check the “System Requirements” and select the size of PLC accordingly.*

## Operating Station

**1250 Euro**

This license is required once per Operating Station. This license includes the HMI and Plc-Driver. This is an “Unlimited” license per station and does not have any limitation to the amount of data or any other limitation.

- No limitation for number of “Tags”, “IO-Bytes” or “Drivers”
- No limitation for amount of “Modules”

## Example: Two Operating Stations

---

This example considers a typical installation of an BatchXpert system, with two Operating stations to provide full operating station redundancy. This example is recommended for small applications.

Amount	License	Item	Total
1	BatchXpert	1250 Euro	1250 Euro
2	Operating Station	1250 Euro	2500 Euro
	<b>Total</b>		<b>3750 Euro</b>

## Example: single Operating Stations

---

This example considers a minimal, very cost-effective solution for very small installations with just one single operating station. This example is NOT recommended because it does not provide any Redundancy.

Amount	License	Item	Total
1	BatchXpert	1250 Euro	1250 Euro
1	Operating Station	1250 Euro	1250 Euro
	<b>Total</b>		<b>2500 Euro</b>

## Example: Four Operating Stations

---

This example considers a typical installation of an BatchXpert system for an medium sized installation. It includes four operating stations, which can also be “Touch Panels PC’s” and provide a full operating station redundancy.

Amount	License	Item	Total
1	BatchXpert	1250 Euro	1250 Euro
4	Operating Station	1250 Euro	5000 Euro
	<b>Total</b>		<b>6250 Euro</b>

## Example: Small CIP Station

---

This example considers a small CIP station with one Touch-PC operating station and one additional PC for redundancy. Since these kinds of machines, do not need the “BatchXpert” license, it is not required.

Amount	License	Item	Total
2	Operating Station	1250 Euro	2500 Euro
	<b>Total</b>		<b>2500 Euro</b>
